

LuxeHabitat Interior & Decor Website Template + Admin CMS

Niche: Luxury Interior Design, Home Decor & Architecture | Complete Zero-Code Website & Admin Suite

Dear Buyer / Website Owner,

Thank you for purchasing this premium website template! You DO NOT need to know HTML, CSS, JavaScript, or any coding to run, customize, or launch this website live on your own domain name. Everything on this website—from your logo, phone number, articles, images, and hero section—is managed 100% visually through the built-in Admin Panel.

STEP 1: The 3 Simple Steps to Get Your Website Live

STEP A

Upload Code to Cloud Host

Upload this template folder to a free 1-click hosting platform (like Render.com or Railway.app). The host builds the website automatically with 0 technical setup.

STEP B

Open Your Admin Panel

Go to `yourwebsite.com/admin` in any browser. Log in with your secure username and password to access your visual dashboard.

STEP C

Customize & Add Your Content

Upload your real logo from your phone/computer, type your business phone & email, edit the hero headline, and your website updates live instantly!

STEP 2: Your Secret Admin Login Credentials

DEFAULT ADMIN LOGIN DETAILS (For All Templates):

- Admin Portal Link: <https://yourdomain.com/admin> (or <http://localhost:3000/admin> for local test)
- Default Username: **admin**
- Default Password: **admin123**

** IMPORTANT: After logging in for the first time, go to the "Security" tab inside the Admin Dashboard to change your password to your own private password.*

How to Host This Website Live on the Internet (Free / Low Cost)

Follow these simple step-by-step instructions to get your website live with a secure HTTPS lock (SSL).

METHOD 1 (RECOMMENDED): Free 1-Click Hosting on Render.com (Takes 5 Minutes)

1. **Create a Free Account:** Go to <https://render.com> and sign up with your email or GitHub.
2. **Upload Project Files:** Upload this template folder to your GitHub account (or drag-and-drop the zip file to GitHub repository).
3. **Click "New Web Service":** On Render dashboard, click the blue button "New +" and select "Web Service".
4. **Connect Your Repository:** Select your uploaded template repository from the list.
5. **Fill in 3 Simple Settings (Leave everything else as default):**
 - **Name:** Enter your website name (e.g. [my-awesome-website](#))
 - **Build Command:** `npm install`
 - **Start Command:** `node server.js`
6. **Click "Deploy Web Service":** Render will build the website in 60 seconds and give you a free live URL (e.g. <https://my-awesome-website.onrender.com>).
7. That is it! Your website is live worldwide with free automatic HTTPS SSL security.

METHOD 2: Standard Cloud VPS Hosting (Hostinger / DigitalOcean / AWS)

If you have your own Cloud Server or VPS (Ubuntu 22.04 / 24.04):

1. **Upload Folder:** Upload this template directory via FileZilla / SFTP to `/var/www/my-website`
2. **Install Node:** Run `"curl -fsSL https://deb.nodesource.com/setup_20.x | sudo -E bash -"` then `"sudo apt-get install -y nodejs nginx certbot python3-certbot-nginx"`
3. **Start Server:** Inside the folder, run `"npm install"` followed by `"npm install -g pm2"` then `"pm2 start server.js --name website"`
4. **Enable Auto-Restart:** Run `"pm2 startup"` and `"pm2 save"` (keeps your site running 24/7 forever, even after server reboots).
5. **Reverse Proxy in Nginx:** Point port 3000 (or the template port) to your domain in `/etc/nginx/sites-available/default`
6. **Free SSL Certificate:** Run `"sudo certbot --nginx -d yourdomain.com -d www.yourdomain.com"` to enable the green lock padlock.

Connecting Your Domain Name (GoDaddy, Namecheap, Cloudflare)

Add these 2 simple DNS records in your domain provider dashboard:

TYPE	NAME / HOST	VALUE / POINTS TO	PURPOSE
A Record	@	Your VPS IP (or Render CNAME)	Points root domain
CNAME	www	@ (or your root domain name)	Points www domain

DNS changes usually update within 15 minutes to 2 hours globally.

How to Customize Every Single Thing via Admin Panel (Visual Guide)

1. Uploading Your Business Logo

Go to Admin > General Settings. Click "Choose File" next to Logo. Select your logo from your computer or phone. Click "Save Settings". Your logo replaces the demo logo across the entire site immediately!

2. Changing Site Title, Phone & Social Links

In General Settings, simply type your business name, contact email, phone number, and social media handles (YouTube, Instagram, Facebook). Click Save.

3. Editing Hero Section & Banners

Click "Hero Section Editor" tab. Change the main headline, subtitle, and buttons. You can toggle between video background or upload a high-resolution hero photo.

4. Adding & Editing Blog Articles

Click "Articles & Blog" tab. Click "+ Create New Article". Type title, choose category, select a cover photo, type content, and hit Publish. You can delete or edit anytime.

5. Adding Custom Pages (About, Services, Contact)

Click "Custom Pages". Click "+ Add New Page". Give it a title (e.g. Our Portfolio), add your text and images, and it automatically gets added to the website navigation.

6. Managing Client Reviews & FAQs

Click "Testimonials" to add 5-star customer reviews with photos. Click "FAQs Manager" to add questions & answers that help buyers trust your business.

7. SEO, Google Analytics & Google Search Console

Click "SEO & Analytics" tab. Paste your Google Analytics (GA4) ID and Google Search Console verification token. The template automatically generates a live sitemap.xml and robots.txt for Google!

About The Creator: Rajat Upadhyay

This digital template suite was engineered and designed by Rajat Upadhyay. My mission is to empower creators, small business owners, professionals, and entrepreneurs with high-converting, aesthetic, and production-ready digital software tools that require zero coding barriers.
